OF THE REGISTER-PAJARONIAN

Airplanes will spray man-made pheromones over Santa Cruz County in early November, the California Department of Food and Agriculture confirmed Tuesday.

The largest area to receive the aerial spraying is a 41.5-square-mile section that takes in Aptos, Soquel, Capitola, Live Oak and Santa Cruz.

Also, the pheromone substance — a chemical that confuses male moths during mating, hindering reproduction — will be applied to 15.5 square miles in the Salinas area and 31.6 square miles in the Prunedale and Las Lomas areas.
