

Toxic waste by county

LOS ANGELES — Here is a county-by-county breakdown of toxic wastes generated in California. The figures, compiled in 1983 by the state Department of Health Services, were included in a January 1984 report to Gov. George Deukmejian by the California Hazardous Waste Management Council.

The actual volume of wastes has probably increased 10 percent to 15 percent, but the proportion produced by each county has probably remained static, according to Jennifer Tachera of the state Department of Health Services in Sacramento.

The numbers are in tons of waste produced per year.
